KHUSHI PARMAR

+1 (551) 235-0673 | khushieeparmar@gmail.com | New York, NY, USA | linkedin.com/in/khushieeparmar | github.com/khushi491

PROFESSIONAL SUMMARY

Software engineer specializing in **backend systems** and **LLM development**, delivering comprehensive solutions from autonomous agents to scalable data architectures. Proven ability to translate ambiguous requirements into production-ready software, including **Web3** payment agents and AI-driven platforms leveraging **Node.js** and **TypeScript**.

SKILLS

Programming & Databases: JavaScript, TypeScript, Python, MySQL (SQL), MongoDB (NoSQL), PostgreSQL, Vector Database, GraphQL,
Backend Engineering: REST API Design, Microservice Foundations, Secure Backend Architecture
Frameworks: React JS, Node JS, Express JS, Next JS, React-Native, Angular, Vue, Chart.js
Cloud & Tools: AWS, GCP, Azure, Docker, Flask, FastAPI, GitHub, Git, Jira, Firebase, Bitbucket, Maven, CI/CD Workflows
AI & Systems: LLM Development, Prompt Engineering, Vector Search, Orchestration, ML Pipelines, Natural Language Processing, machine learning

PROFESSIONAL EXPERIENCE

Full Stack Developer | Wiseai.care *December 2025 - February 2026*

- Built production-grade chat interfaces with dynamic state management and real-time response rendering, optimized for performance and UX.
- Engineered scalable backend APIs and frontend integrations using Node.js and **Python**, deploying securely on **GCP** with containerized infrastructure.
- Assisted with backend services using **Spring and Hibernate**, understanding ORM concepts and layered application design.
- Followed **SDLC processes**, contributing to testing, debugging, and iterative feature development in a team environment.

Full Stack Developer | Stealth Startup *February 2024 - August 2025*

- Worked on a metaverse-based **NFT** gaming platform. Built full-stack features for a blockchain-based metaverse game ecosystem.
- Implemented game APIs and user interactions for **marketplace**, assets, and gameplay systems.
- Worked with **Web3** integrations for wallet connectivity and NFT ownership verification.
- Implemented CI/CD pipelines using GitHub Actions and **Docker** to automate build, testing, and deployment workflows, improving development efficiency and release reliability.

Full Stack Developer | Webforest LLP *November 2022 - December 2023*

- Designed and developed **full-stack** applications and **backend** services using Node.js, **Python**, and Core Java, applying OOP principles to build reliable systems.
- Built RESTful APIs to support microservices-based architectures, ensuring seamless **end-to-end** data flow and production stability.
- Improved system scalability by deploying services on GCP and Azure;
- Streamlined deployments using **Docker, Kubernetes, CI/CD**, and **infrastructure-as-code** concepts, improving release stability and iteration speed.

React Js Developer | Wedowebapps LLC *May 2021 - November 2022*

- Built responsive, mobile-friendly UIs using **TypeScript**, **React**, and **Redux** for efficient state management and predictable data flows.
- Applied **software design patterns** and component-based architecture to improve frontend scalability and maintainability.
- Collaborated in an **Agile/Scrum** setup, aligning frontend delivery with backend services and overall product timelines.
- Optimized **user feedback** loops by improving client–server communication and asynchronous data handling via AJAX and Axios.
- Implemented health checks, logging, and monitoring practices to improve service reliability and reduce downtime

Web Developer Intern | Techyhood Software Solution *December 2020 - May 2021*

- Developed **full stack** features using Core Java, JDBC, and Node.js, gaining hands-on experience with enterprise-style web applications.
- Built and consumed **REST APIs**, working with **SQL and NoSQL** databases for data persistence.
- Assisted with backend services using **Spring and Hibernate**, understanding ORM concepts and layered application design.
- Followed **SDLC processes**, contributing to testing, debugging, and iterative feature development in a team environment.

PROJECTS & OUTSIDE EXPERIENCE

CareerBakers - AI-Powered Resume & Interview Platform

- Built a full-stack AI career platform as a Turborepo monorepo with unified auth, UI, and a Prisma/PostgreSQL data layer spanning resumes, interviews, jobs, and billing.
- Integrated OpenAI GPT-4 and the Assistants API to power resume tailoring, ATS optimization, and JD-based mock interviews, using a single AI engine across both the candidate-prep and recruiter-screening sides.
- Shipped production concerns end to end: NextAuth/Google OAuth, Stripe subscription billing with webhook handling, and Prisma-parameterized queries, deployed on Vercel.

ArcPay - Chainless Cross-Chain Payment System

- Built an **LLM** payment assistant (OpenRouter function calling) that turns **natural-language** requests like "send $5 to coffee@arcpay" into structured payment calls, resolving UPI-style @arcpay handles to on-chain addresses, while a deterministic Smart Transfer engine, not the model, selects the settlement path.
- Implemented cross-chain **USDC** settlement over Circle **CCTP** (burn-and-mint with attestation polling) and same-chain EURC→USDC swaps, aggregating balances across Arc, **Ethereum** Sepolia, and Solana into one transfer.
- Exposed payment, wallet, and balance operations as **MCP** tools behind typed **Next.js** API routes (Circle Programmable Wallets, Prisma/Postgres), making every action agent-callable.

Devolution-World - Metaverse NFT Marketplace

- Designed and deployed scalable backend APIs using Node.js on **GCP**, containerized with **Docker** and orchestrated via **Kubernetes** to support 10,000+ concurrent users.
- Reduced server response times by 40% by optimizing AI-driven backend services and monitoring performance across cloud environments.
- Built secure backend APIs using Node.js and **GCP**, integrating payment and consumption tracking with robust database architectures.
- Supported 200% user growth by deploying containerized services with **Docker** and **Kubernetes**, using automated **CI/CD** pipelines for rapid.

EDUCATION

Monroe University, New Rochelle, NY, USA | Master's, Computer Science | GPA: 3.9 — **September 2023 - December 2025**

Maharaja Sayajirao University, Baroda, Gujarat, India | Bachelor's Computer Application — **Jun 2018 - May 2021**
